Soon in Tokyo, Barcelona

Versatility + Space

Soon in Tokyo, a new communication agency located in Barcelona, commissioned lagranja to design a versatile space where offices can live together with a musical and gastronomic ambient.

Lagranja

Design for Companies

lagranja is a design studio founded in May 2002 by young creatives working mainly in interior design, exhibitions and industrial design projects in Spain and Italy. The studio constantly collaborates with other creatives (graphic designers and new media, photographers and video makers, architects) who join us to complete each project.

- 01/ Individual workplace.
- 02/ Time for a meeting.
- 03/ Upstairs work station.

Communication among the different spaces becomes the core of the project.

The project retains the disposition of the exterior volumes and the facade of the existing industrial warehouse, but completely reformulating the articulation of the space. The search for natural light, by means of courtyards, skylights and terraces, and the visual communication among the different spaces becomes the core of the project.

Reflecting ample space and creativity within these walls, this look is an ideal workstation for those who seeks professionalism and inspiration well at the same time.
